

**Amendments to the Claims:**

This listing of claims replaces all prior versions, and listings, of claims in this application.

**Listing of Claims:**

1-4 (cancelled)

5. (Currently Amended) ~~The A service providing system of claim 2, wherein the system further comprising:~~  
~~a charge processing device for performing charge processing to the user upon receipt of log information for charging a service charge,~~  
for providing a service to a user terminal device through a network, the system comprising a user verification device and a service providing device including at least one service providing web,  
wherein the user verification device judges whether or not a user of the user terminal device is a registrant and transmits an access ticket for accessing a service providing web to the terminal upon receipt of designation of a desired service providing web when the user verification means judges that the user of the terminal is a registrant,  
wherein the service providing web judges whether or not a request for service accompanies the access ticket upon receipt of the request for service from the terminal device and provides a service to the terminal device when the service providing web judges that the request for service accompanies the access ticket,

wherein the system further comprises a charge-processing device for performing charge-processing to the user upon receipt of log information for charging a service charge, and

wherein the user verification device transmits the log information to the charge-processing device in response to issuance of the access ticket.

6-17. (canceled).

18. (New) The service providing system of claim 5, wherein the user verification device manages the information for verification for each of the service providing webs and controls issuance of the access ticket related to each of the service providing webs.

19. (New) The service providing system of claim 5, wherein the user verification device manages common information for verification in relation to a plurality of service providing webs and controls issuance of the access ticket related to each of the service providing webs.

20. (New) The service providing system of claim 5, the system further comprising:  
a charge-processing device for performing charge-processing to the user upon receipt of log information for charging a service charge,  
wherein the service providing web transmits the log information to the charge-processing device when a request for service accompanying the access ticket is received.

21. (New) The service providing system of claim 5, the system further comprising:  
a user-oriented recording part for storing service providing webs capable of being accessed by each user, and  
menu generating means for generating a user-oriented menu in accordance with content recorded in the user-oriented recording part when the user verification means judges that user is a registrant.

22. (New) The service providing system of claim 5, wherein the user verification device and the charge-processing device are composed of one computer.

23. (New) A user verification device capable of communicating with a user terminal device,  
wherein the user verification device judges whether or not a user of the user terminal device is a registrant and transmits an access ticket for accessing a service providing web to the terminal upon receipt of designation of a desired service providing web when the user verification means judges that the user of the terminal is a registrant, said service providing web judging whether or not a request for service accompanies the access ticket upon receipt of the request for service from the terminal device and providing a service to the terminal device when the service providing web judges that the request for service accompanies the access ticket,

wherein the user verification device transmits the log information to the charge-processing device in response to issuance of the access ticket, said charge-processing device performing charge-processing to the user upon receipt of log information for charging a service charge.

24. (New) The user verification device of claim 23, wherein the user verification device manages the information for verification for each of the service providing webs and controls issuance of the access ticket related to each of the service providing webs.

25. (New) The user verification device of claim 23, wherein the user verification device manages common information for verification in relation to a plurality of service providing webs and controls issuance of the access ticket related to each of the service providing webs.

26. (New) The user verification device of claim 23, the device further comprising:  
a user-oriented recording part for storing service providing webs capable of being accessed by each user, and

menu generating means for generating a user-oriented menu in accordance with content recorded in the user-oriented recording part when the user verification means judges that user is a registrant.

27. (New) The user verification device of claim 23, wherein the user verification device and the charge-processing device are composed of one computer.

28. (New) A method of providing a service using terminal devices capable of communicating one another through a network, a user verification web, a service providing web and a charge-processing device, the method comprising the steps of:

receiving an access ticket related to a desired service providing web after performing user verification procedure by accessing the user verification web from the terminal device when the terminal device receives the service from the service providing web;

accessing to the desired service providing web by the terminal device with the access ticket; and

providing the service to the terminal device by the service providing web after confirming accompany of the access ticket,

judging by the user verification web whether or not a user of the user terminal device is a registrant and transmits an access ticket for accessing a service providing web to the terminal upon receipt of designation of a desired service providing web when the user verification means judges that the user of the terminal is a registrant,

judging by the service providing web whether or not a request for service accompanies the access ticket upon receipt of the request for service from the terminal device and providing a service to the terminal device when the service providing web judges that the request for service accompanies the access ticket,
